### **Original Articles**

- Clinical and Economic Burden of Hospitalizations for Infective Endocarditis in the United States

  Mohamad Alkhouli, Fahad Alqahtani, Muhammed Alhajji, Chalak O. Berzingi, and M. Rizwan Sohail

  Although the adjusted in-hospital mortality of endocarditis and the cost of admission decreased over time, the overall expenditure on in-hospital care for endocarditis increased.
- Prognostic Relevance of Cardiorespiratory Fitness as Assessed by Submaximal Exercise Testing for All-Cause Mortality: A UK Biobank Prospective Study

Jari A. Laukkanen, Setor K. Kunutsor, Thomas Yates, Peter Willeit, Urho M. Kujala, Hassan Khan, and Francesco Zaccardi

Cardiorespiratory fitness, assessed by submaximal exercise testing, improves mortality risk prediction beyond conventional risk factors, and its prognostic relevance varies across cardiovascular risk levels.

679 Grip Strength and Walking Pace and Cardiovascular Disease Risk Prediction in 406,834 UK Biobank Participants

Claire E. Welsh, Carlos A. Celis-Morales, Frederick K. Ho, Rosemary Brown, Daniel F. Mackay, Donald M. Lyall, Jana J. Anderson, Jill P. Pell, Jason M.R. Gill, Naveed Sattar, Paul Welsh, and Stuart R. Gray

The addition of grip strength or usual walking pace to existing risk scores results in improved cardiovascular disease risk prediction, with an additive effect when both are added.

Frequency of Medical Reversal Among Published Randomized Controlled Trials Assessing Cardiopulmonary Resuscitation (CPR)

Diana Herrera-Perez, Ryan Fox-Lee, Jeffrey Bien, and Vinay Prasad

The reversal of so many accepted medical practices serves to remind us that novelty does not necessarily equate to improved quality.

- Participation Bias in a Survey of Community Patients With Heart Failure

  Irmak Simsek, Sheila M. Manemann, Kathleen J. Yost, Alanna M. Chamberlain, Matteo Fabbri, Ruoxiang Jiang,
  Susan A. Weston, and Veronique L. Roger
  - In a large survey of patients with heart failure, patients who did and did not respond had notable differences in clinical characteristics and outcomes.
- Psychological Morbidity and Chronic Disease Among Adults With Traumatic Spinal Cord Injuries: A Longitudinal Cohort Study of Privately Insured Beneficiaries

  Mark D. Peterson, Neil Kamdar, Anthony Chiodo, and Denise G. Tate

  Clinical efforts are needed to improve mental health screening and targeted interventions to reduce the risk for psychological disease onset in the traumatic spinal cord injury population.
- P29 Effectiveness and Safety of Oral Anticoagulants in Patients With Nonvalvular Atrial Fibrillation and Diabetes Mellitus

Gregory Y.H. Lip, Allison V. Keshishian, Amiee L. Kang, Xiaoyan Li, Amol D. Dhamane, Xuemei Luo, Neeraja Balachander, Lisa Rosenblatt, Jack Mardekian, Anagha Nadkami, Xianying Pan, Manuela Di Fusco, Alessandra B. Garcia Reeves, Huseyin Yuce, and Steven B. Deitelzweig

This large observational study reports that non-vitamin K antagonist oral anticoagulants were associated with variable rates of stroke/systemic embolism and major bleeding compared with warfarin and compared with each other.

944 Monoclonal Gammopathy of Undetermined Significance: Indications for Prediagnostic Testing, Subsequent Diagnoses, and Follow-up Practice at Mayo Clinic

Aishwarya Ravindran, Kandace A. Lackore, Amy E. Glasgow, Matthew T. Drake, Miriam A. Hobbs, Taxiarchis Kourelis, Shaji Kumar, Robert A. Kyle, Nelson Leung, Eli Muchtar, and Ronald S. Go

Even at an institution with a great awareness of monoclonal gammopathy of undetermined significance, the follow-up practices varied substantially, even in hematologists.

Brain Volume: An Important Determinant of Functional Outcome After Acute Ischemic Stroke 955 Markus D. Schirmer, Kathleen L. Donahue, Marco J. Nardin, Adrian V. Dalca, Anne-Katrin Giese, Mark R. Etherton, Steven J.T. Mocking, Elissa C. McIntosh, John W. Cole, Lukas Holmegaard, Katarina Jood, Jordi Jimenez-Conde, Steven J. Kittner, Robin Lemmens, James F. Meschia, Jonathan Rosand, Jaume Roquer, Tatjana Rundek, Ralph L. Sacco, Reinhold Schmidt, Pankaj Sharma, Agnieszka Slowik, Tara M. Stanne, Achala Vagal, Johan Wasselius, Daniel Woo, Stephen Bevan, Laura Heitsch, Chia-Ling Phuah, Daniel Strbian, Turgut Tatlisumak, Christopher R. Levi, John Attia, Patrick F. McArdle, Bradford B. Worrall, Ona Wu, Christina Jem, Ame Lindgren, Jane Maguire, Vincent Thijs, and Natalia S. Rost; on behalf of the MRI-GENIE and GISCOME Investigators and the International Stroke Genetics Consortium

The role of brain volume as a prognostic, protective biomarker has the potential to forge new areas of research and advance current knowledge of mechanisms of post-stroke recovery. A. Clest of Padal Ambiertals Pr
